

Tool Report

Zhaojunlin - 25020007178

August 30, 2026

1 Result

The core formula for average throughput calculation is:

$$Throughput = \frac{Total\ Requests}{Total\ Time} \quad (1)$$

As shown in Equation (1), we calculate the QPS.

Config Item	Value
CPU Cores	8

Table 1: Test Environment Info

All test runs use the configuration listed in Table 1.

2 Conclusion

The test completes successfully.
